Allowable Subject Matter

1. Claims 1-35 are allowed.
2. The following is an examiner's statement of reasons for allowance: The instant application is in condition for allowance, because the cited prior art fails to disclose a process for the regeneration of a catalyst, comprised of at least one precious metal on an amorphous silica-alumina support, in which process the catalyst is impregnated with an acid in liquid state, followed by reduction or oxidation of the impregnated catalyst at a temperature above 200°C.

Neuenfeldt et al. discloses a process for regenerating a supported noble metal catalyst. The catalyst support may be comprised of combinations of aluminum and silicon (col. 2, lines 3-8). Neuenfeldt et al. continues to disclose wherein the catalyst is regenerated by washing with hydrochloric acid (col. 4, lines 23-27). Neuenfeldt et al. continues to disclose wherein a thermal treatment may then be carried out of at least 500°C (col. 3, lines 39-40) and adding a hydrogen gas to the catalyst reactor (col. 2, lines 54-65). However, Neuenfeldt et al. teaches wherein the hydrogen treatment is carried out below 200°C.

Landolt et al. (US Patent 4,359,400) discloses a catalyst regeneration procedure. The catalyst is treated with hydrogen and then treated with a dry hydrogen chloride stream. Landolt et al. does not disclose wherein the catalyst is regenerated with an acid in liquid state.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent 4,330,429.
